### INSTRUCTIONS FOR USE

Dear Customer,

We are delighted that you have chosen the **Hojdakov Maximus hammock**, designed for adults. It can hold a maximum weight of **140 kg**. This is a product, based on our own design, that we have made with love in the Czech Republic in partnership with Czech manufacturers and suppliers. **We use only high-quality and non-toxic materials in the manufacture of this product.** By purchasing this product, you are also supporting sheltered workshops.

Hojdakov Maximus relaxes your body and soul. With its **100 cm** wide bar, it provides ample inner space while respecting the smaller space available in some homes. The quality PUR foam mattress is a guarantee that people of all ages will lie comfortable in the hammock.

Thank you for your purchase!

The Hojdakov Team

## INTENDED USE

The Hojdavak Maximus hammock is designed to be used for swinging, sitting and lying down. Any methods and conditions of use other than those specified by us are not permitted! The maximum bearing capacity is 140 kg.

## SAFETY ALERT

- **Carefully read the instructions for use and use the product according to the instructions given** – any modifications and changes to the product that have a negative impact on safety and health are not permitted. Do not hang the hammock near a fire or other heat sources.
- **Do not exceed the permitted bearing capacity of 140 kg** – the manufacturer is not liable for any accidents.
- **Do not sit on the wooden bar.**
- **Regularly check the condition of the ropes used** – they must be in perfect condition and free of mechanical wear and tear. If damage is detected, no matter how little, replace the rope immediately!
- **Regularly check the strength of the suspension** – the ceiling screw, separate stand and other similar components. Position the hammock only in places that will safely support the load. Avoid gypsum board ceilings or other similar types of wall-covering. Consult an anchoring specialist on how to suspend the hammock safely. Check the strength of the screws and brackets by conducting a load test using your own weight.
- **Packaging** – after the product has been unpacked, plastic bags and other packaging must be kept out of reach of children under 3 years of age.

## CONTENTS OF PACKAGING

- Textile bag made of fabric with a Öko-Tex Standard 100 health certificate
- 140 × 40 cm polyurethane (PUR) foam mattress
- Protective mattress case with zip
- Wooden spacer made of hard beech – 100 cm in length
- Indoor option – unpainted/unvarnished
- Outdoor option – treated with special OSMO oil
- 2× wooden support bars of hard beech – 40 cm in length
- Indoor option – unpainted/unvarnished
- Outdoor option – treated with special OSMO oil
- Snap-hook
- Polyester rope with a an 8 mm diameter cable
- Pillow with a zip pillowcase, 30 × 50 cm
- Non-woven fabric case

## MAINTENANCE

The textile bag can be machine washed at 40 °C and dried on a moderate setting. For the indoor option, we recommend varnishing or painting the wooden parts if used outdoors. The wooden parts of the outdoor option need to be re-treated every year with appropriate oil. Protect the hammock from rain, extreme weather and direct sunlight, as this naturally lightens the fabrics. This product has a useful life of at least 2 years.

## WHERE TO HANG IT

A space where the whole family spends much of their time is ideal. Other suitable places for suspending the hammock are a gazebo or a tree in the garden. Basically, wherever you like to rest.

## HOW TO HANG IT

The hammock can be suspended using any secure anchor with a minimum bearing capacity of 200 kg, such as a screw installed in the ceiling, or via any other fixed element that can support the load (stairs, beams, branch, etc.).

The ideal height of the suspension point for comfortable use of the hammock is at least 220 cm above the ground, taking into account the size of the hammock (see Figure 1). Higher positioning of the hanging point will require an extra rope to extend the length. Tie the extension rope so that it does not fray at the attachment point (see Figure 2).

Consult an anchoring specialist on the safe installation of the anchor. There are many ways to do this, depending on the possibilities available and your preferences. Our suspension methods can be found in the e-shop under "Hammock Suspension".

**PILLOW**

**TEXTILE BAG**

**PUR MATTRESS  
INSERTED INTO THE  
POCKET CLOSED  
WITH VELCRO**

### **ASSEMBLY**

- 1) Decide **where and how to hang the hammock** and install the anchor.
- 2) Spread out the textile bag and insert the mattress into the pocket in the middle of the fabric.
- 3) Take the wooden bar with the side-pieces tied and use the snap-hook to hang it in the place you have prepared. Next, put the side wooden supports into the side folds/tunnels in the textile bag and secure with a rope. Make a loop or tie a knot on the rope.
- 4) **Important! Check** that everything is installed correctly.
- 5) Regularly check that the suspension is firm and that all parts of the hammock are properly installed and closed.

### **PRODUCT DISPOSAL**

If the hammock becomes irreparably damaged or reaches the end of its useful life, it must be dismantled and separated into its individual parts, components and materials. These are then disposed of in accordance with laws and regulations applicable at the time of disposal.
